EF

Dr. Mohamed El Fadil, MD

د. محمد الفاضل

PHYSICIAN ◆ FOUNDER & CEO, HEALTHCARE AI ◆ INTEROPERABILITY & STANDARDS

"Clinical judgement decides what ships. Engineering decides whether it can be trusted, audited and maintained."

Physician-founder who builds the software himself. It started in the emergency room, then the operating theatre, then the claims desk — the same discovery each time: a healthcare system engineered around everyone except the physician actually making the call. Seven years later, that discovery became **BrainSAIT**, an AI-native healthcare platform for Saudi Arabia and the wider MENA region, aligned to Vision 2030 — built, operated and verified by one founder, with no third-party platform dependency, so that what is claimed can always be re-proven rather than taken on faith.

> *"A practising physician who builds the software himself — clinical and engineering in one person. Most teams have one side or the other, and the handoff between them is exactly where healthcare AI usually fails."*

FLAGSHIP SOLUTION

BrainSAIT Provider Registry — *BPR*

Built from one diagnosis, reached twice — once at the bedside, once in the data: every claims engine, EMR and interoperability layer we studied treats the physician as an endpoint, not the center, of the system meant to serve patients through them. **BPR inverts that architecture** — a verifiable, provider-owned identity and credential registry that puts the doctor at the addressable, auditable core of every claim, referral and credential check across NPHIES and the wider GCC health system. **Explore the registry — brainsait.de/bpr**

MEASURABLE OUTCOMES

80
Production Cloudflare Workers across 63 routed endpoints — built & operated in-house

415
Automated assertions probing endpoints, DNS & databases daily; drift alerts same morning

148
Products catalogued across 12 categories — 56 live on the public storefront

US$0
Inference spend, down from US$157/month — root-caused to 12 workers, removed, verified

52
Production automation workflows (38 active) fanning commerce, licensing & claims across 6 platforms

293
Public repositories, 96 authored — open-source healthcare interoperability infrastructure

TECHNICAL & EXECUTIVE EXPERIENCE

Founder & Chief Executive Officer

2019 – PRESENT

BrainSAIT Ltd. · Riyadh, Saudi Arabia · UK-registered · Monsha'at licence no. 0711

- Built and operate an AI-native healthcare ecosystem of **80 production services** — clinical decision support, NPHIES claims intelligence, clinical NLP, digital identity and bilingual agent orchestration — from a single founder-owned stack with no platform lock-in.
- Constructed the commercial spine across three storefronts and a bidirectional ERP bridge: **148 products** catalogued, 56 live publicly, spanning LEARN, BUILD, SOLUTIONS, OID & Registry, agent templates and SaaS tiers.
- Architected **FHIR R4 / HL7 v2.x** interoperability with deep **NPHIES** integration: a Python claims client under CI, a phased submission pipeline, and a live bilingual claim-rejection advisor.
- Founded the digital identity layer — **IANA Private Enterprise Number** registered for the company's arc, Ed25519-signed agent passports, and a verifiable provider-credential model with public QR verification.
- Traced a **US$157 monthly inference overrun** to twelve specific workers, removed the bindings and verified spend at ≈US$0 with every product surface still serving.
- Authored the verification harness — **415 assertions** across endpoints, DNS, databases and source contracts, scheduled daily, wired to alerting so claims stay re-provable, not merely stated.
- Made bilingual delivery structural, not translational — Arabic and English authored from one source across code, clinical interface, corpus and commercial material.
- Published **2 open-source packages** to PyPI (brainsait-pyheart, brainsait-pybrain); maintain 96 authored public repositories across interoperability, identity and clinical NLP.

EDUCATION

Bachelor of Medicine & Surgery (MBBS)
International University of Africa
2010 – 2011

Improvement Advisor Professional Development Program
Institute for Healthcare Improvement, Boston, USA
2022 – Present

MEDICAL & CLINICAL EXPERIENCE

Corporate Physician — RCM, Claims Rejection Review & Resubmission

OCT 2024 – PRESENT

Al Hayat National Hospital · Saudi Arabia · 6 branches

- Review claims-rejection output across **all 6 branches**, covering every contracted insurance company plus the **Ministry of Health (MOH)**, to establish the full rejection picture branch by branch.
- Audit rejected claims, then report and analyse the underlying data to separate systemic denial patterns from one-off errors.
- Communicate findings to stakeholders across clinical, billing and IT teams to architect corrective solutions at the source of each pattern, not just at the claim level.
- Prepare and oversee resubmission of corrected claims, tightening the review-to-resubmission cycle across every branch.
- Built hands-on depth in payer rejection data, **NPHIES integration** and automated-solution implementation — experience now feeding directly into BrainSAIT's claim-rejection advisor and resubmission pipeline.

FEEDS DIRECTLY INTO THE BUSINESS

This is the live dataset ClaimLinc was built to automate — six branches, every payer and MOH, running concurrently with the product it informs, not recalled afterwards from memory.

Critical Care & ICU Physician

APR 2021 – SEP 2024

Anfas Medical Care Hospital · Riyadh, Saudi Arabia

Managed complex, critically ill patients, applying evidence-based protocols to high-acuity decisions while running BrainSAIT in parallel.

TRANSFERRED INTO THE BUSINESS

ICU record-keeping, handover gaps and after-hours documentation were the direct source of BrainSAIT's clinical-documentation and ambient-capture product requirements — specified at the bedside, not from a requirements document.

Neurosurgery Physician

MAY 2018 – JAN 2021

Aster Sanad Hospital · Riyadh, Saudi Arabia

Contributed to multidisciplinary neurosurgical teams supporting complex procedures, advancing outcomes through clinical precision and disciplined coordination.

TRANSFERRED INTO THE BUSINESS

Multidisciplinary coordination under time pressure shaped the agent-orchestration design — deterministic hand-offs with explicit accountability, which became the LINC agent model.

Emergency Medicine Physician

JUN 2016 – JUN 2018

Rafa Medical Center · Riyadh, Saudi Arabia

Delivered emergency care in high-pressure settings, making rapid, high-stakes decisions across a wide spectrum of acute presentations.

TRANSFERRED INTO THE BUSINESS

Frontline triage under uncertainty became the design brief for the decision-support surface — speed, a defensible rationale and an explicit confidence figure, rather than an answer without provenance.

CORE COMPETENCIES

Executive & Strategic

- Strategic leadership & P&L ownership
- Healthcare innovation
- AI technology strategy
- Strategic partnerships & ecosystem building
- Product development & go-to-market
- Operational excellence & cost engineering

Clinical & Decision-Making

- Emergency medicine
- Neurosurgery
- Critical care & ICU
- Clinical decision support
- Revenue-cycle & claims review
- Evidence-based practice

AI & Interoperability

- FHIR R4 & HL7 v2.x
- NPHIES claims
- Clinical NLP
- Retrieval-augmented generation
- Federated learning
- Agent orchestration & MCP

Standards, Regulatory & Security

- IANA OID / private enterprise numbering
- PDPL / HIPAA / GDPR automation
- Digital identity & consent
- Auditability & signed receipts
- Public-sector tender readiness

Engineering & Delivery

- Python & PyPI publishing
- Flask / Django / FastAPI
- React, Xcode & mobile
- Cloud-native (Cloudflare)
- CI/CD & automated verification

Commercial

- Enterprise & B2B sales
- Pricing & packaging
- E-commerce & digital delivery
- Revenue-cycle automation
- Fintech integration

PUBLICATIONS & THOUGHT LEADERSHIP

NOVEL

The Republic of Cells

A literary exploration of the body as a living republic of cells. Written first in English, then re-authored in Arabic — not as a translation, but as though written for the first time.

BOOK

OI vs AI

On the relationship between Original Intelligence (the human brain) and Artificial Intelligence in clinical decision-making — the argument underpinning BrainSAIT's clinical-governance model.

PYPI

brainsait-pyheart · brainsait-pybrain

Open-source healthcare packages: an event-driven, HIPAA-aware FHIR/HL7 interoperability engine, and a unified intelligence platform for data harmonisation, Clinical NLP and federated learning.

SERIES

PulseForge

Twelve-volume bilingual medical-specialty series, Arabic and English.

ESSAYS

Selected writing

"The Healthcare Claim Journey: From Submission to Settlement in SBS" (Arabic, 2026) · "The Bridge" (2025) · "A System Built Around the Physician" · "The Leverage Point."

Method

Inventory first, never build twice; integrate, interconnect and automate; verify live before anything is called done. The status is the evidence.

Verification note. Every quantified figure was measured against the live estate on 16 October 2026 and is reproducible on request — Cloudflare account: 80 Worker scripts, 63 routes, 39 D1 databases, 103 KV namespaces; Shopify Admin: 148 active products, 56 publicly listed; Daftra ERP: 78 products / 37 clients / 30 invoices; n8n: 52 workflows (38 active); GitHub API: 293 public repositories; a 415-assertion harness run daily.

Commercial status. The platform is pre-revenue — no external customer revenue has been booked, and this document does not imply otherwise. What it demonstrates is an operating platform, a regulatory position and a shipped catalogue, verifiable on request at **verify.brainsait.de**.
